ROBOT

**Manual lifter for needlebeds of
knitting machines**

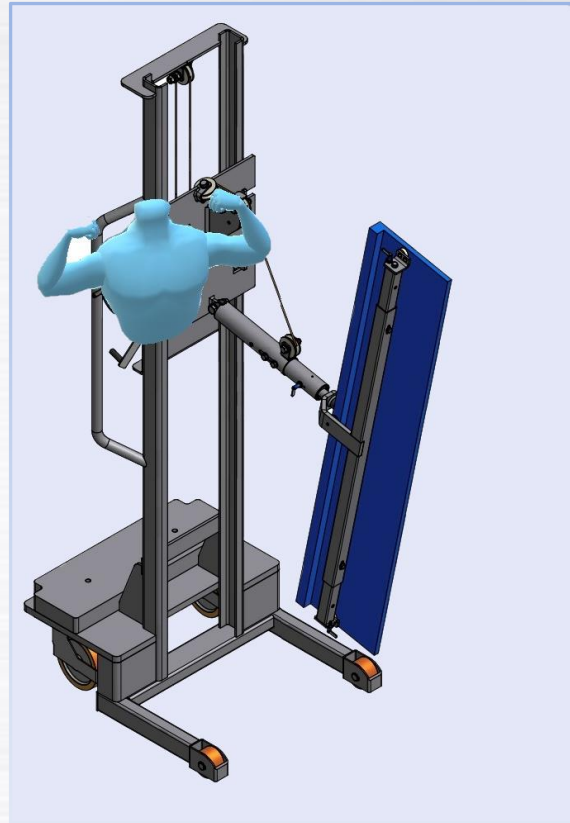

info@gali8.com

www.knitting-machines.it

Our revolutionary **H2G ROBOT** has been designed to work in less than one meter of space between one knitting machine and another, and allows you to take out both the front and the back needlebed staying on the front side of your knitting machine.

H2G ROBOT will allow you to operate in complete safety, saving the physical effort that the handling of the needlebeds requires.

From the knitting machine directly to the **H2G** needlebed washing machine, without any effort.

H2G ROBOT may seem like a normal manual lifter, like many others already on the market, but the unique feature that distinguishes it is the ability to rotate the needlebed of 360 ° to allow movement even in the most confined spaces.
